the revival of translation as a means of learning and teaching a foreign language and as a skill in its own right is occurring at both undergraduate and postgraduate levels in universities in this book sara laviosa proposes a translation based pedagogy that is grounded in theory and has been applied in real educational contexts this volume draws on the convergence between

the view of language and translation embraced by ecologically oriented educationalists and the theoretical underpinnings of the holistic approach to translating culture it puts forward a holistic pedagogy that harmonizes the teaching of language and translation in the same learning environment the author examines the changing nature of the role of pedagogic translation starting with the grammar translation method and concluding with the more recent ecological approaches to foreign language education translation and language education analyses current research into the revival of translation in language teaching and is vital reading for translators language teachers and postgraduate students working in the areas of translation studies and applied linguistics

this bestselling coursebook introduces current understanding about culture and provides a model for teaching culture to translators interpreters and other mediators the approach is interdisciplinary with theory from translation studies and beyond while authentic texts and translations illustrate intercultural issues and strategies adopted to overcome them this new third edition has been thoroughly revised to update scholarship and examples and now includes new languages such as arabic chinese german japanese russian and spanish and examples from interpreting settings this edition revisits the chapters based on recent developments in scholarship in intercultural communication cultural mediation translation and interpreting it aims to achieve a more balanced representation of written and spoken communication by giving more attention to interpreting than the previous editions especially in interactional settings enriched with discussion of key recent scholarly contributions each practical example has been revisited and or updated complemented with online resources which may be used by both teachers and students this is the ideal resource for all students of translation and interpreting as well as any reader interested in communication across cultural divides additional resources are available on the routledge translation studies portal routledgetranslationstudiesportal com

at first glance mathematics and music seem to be from separate worlds one from science one from art but in fact the connections between the two go back thousands of years such as pythagoras s ideas about how to quantify changes of pitch for musical tones musical intervals mathematics and music composition perception and performance explo

this book introduces path breaking applications of concepts from mathematical topology to music theory topics including harmony chord progressions rhythm and music classification contributions address topics of voice leading tonnetze maps of

notes and chords and automatic music classification focusing on some geometrical and topological aspects of the representation and formalisation of musical structures and processes the book covers topological features of voice leading geometries in the most recent advances in this mathematical approach to representing how chords are connected through the motion of voices leading to analytically useful simplified models of high dimensional spaces it generalizes the idea of a tonnetz a geometrical map of tones or chords and shows how topological aspects of these maps can correspond to many concepts from music theory the resulting framework embeds the chord maps of neo riemannian theory in continuous spaces that relate chords of different sizes and includes extensions of this approach to rhythm theory it further introduces an application of topology to automatic music classification drawing upon both static topological representations and time series evolution showing how static and dynamic features of music interact as features of musical style this volume will be a key resource for academics researchers and advanced students of music music analyses music composition mathematical music theory computational musicology and music informatics it was originally published as a special issue of the journal of mathematics and music

this book brings together diverse recent developments exploring philosophy of mathematics in education the unique combination of ethnomathematics philosophy history education statistics and mathematics offers a variety of different perspectives from which existing boundaries in mathematics education can be extended the ten chapters in this book offer a balance between philosophy of and philosophy in mathematics education attention is paid to the implementation of a philosophy of mathematics within the mathematics curriculum to become a philosophy in mathematics education in doing so many chapters provide ideas for actual practice and some practical examples directly usable in teacher training and in mathematics classrooms

the fundamental aim underlying cellular and biochemical sciences is to emphasize diversified topics of current interest to postgraduate students pursuing different courses in the area of biological sciences including zoology botany biochemistry and biotechnology the text is also relevant to the students of life sciences biosciences cell biology bioengineering and pharmacology a total of 58 topics have been incorporated in the book and some of the topics are rarely found in other books of biology new information has been introduced which updates existing knowledge and enables the book to justify its

claim as the most comprehensive text in the sphere of cellular and biochemical sciences at the postgraduate and competitive examination levels each and every chapter has been designed in lucid and readable manner there are references suggested readings long questions and objective questions at the end of chapters for revision of topics

this trainers guide was borne out of indicative results of needs assessments of medical trainers who are subject specialists but have minimal skills in executing curricula into classroom teaching and learning the learning material in this guide is designed and developed using principles of problem based learning it offers practical suggestions on lesson planning classroom and laboratory activities and presentation templates applicable to competency training the development of numerous professional and positive life skills can be attributed to problem based learning these skills include communication professional values and ethics teamwork reflective practice self regulation self responsibility self drive independent and life long learning this guide has been designed to incorporate teaching and learning methods that develop these skills
