provides an introduction to decision analysis this book is based upon a number of papers and articles taken from the operational research society s journal and other publications however the book is not simply a collection of reprints professor french has provided extensive notes and commentary to weave the extracts into a coherent whole although techniques are presented the main thrust is to convey the purpose of decision analysis and the interpretation that should be placed upon its output vital topics but ones seldom discussed

in introductory texts the writing is aimed at the non technical reader

the present book finds its roots in the international conference on methods and applications of multiple criteria decision making held in marseille in may 1997 a small number of contributions to that conference were selected via a refereeing procedure and retained authors were requested to include in their final version their more recent results this explains why some papers differ significantly from the original presentation the introductory paper of raynaud addresses the long range forecasts in multiple criteria decision making on the basis of a delphi process that was run before and during the congress in a second part the french author explains how he and some of his partners could find the proof of an important conjecture the iteration of a strongly monotonic choice function is not a strongly monotonic ranking function the second part of the book covers methodological aspects of decision theory the contribution of bouyssou and pirlot concerns the reformulation of classical conjoint measurement models that induce a complete and transitive preference binary relation on the set of alternatives which seem to be unrealistic when decision makers are asked to compare objects evaluated on several attributes the authors propose to consider non transitive non complete and non additive decomposable conjoint models they define properties that characterize such models

decision theory and decision analysis trends and challenges is divided into three parts the first part overviews provides state of the art surveys of various aspects of decision analysis and utility theory the second part theory and foundations includes theoretical contributions on decision making under uncertainty partial beliefs and preferences the third section applications reflects the real possibilities of recent theoretical developments such as non expected utility theories multicriteria decision techniques and how these improve our understanding of other areas including artificial intelligence economics and environmental studies

this best selling and up to date survey of decision analysis concepts and techniques is accessible to students with limited mathematical backgrounds it is designed for advanced undergraduate and mba level courses in decision analysis and also for business courses in introductory quantitative methods prerequisites college algebra introductory statistics

by framing issues identifying risks eliciting stakeholder preferences and suggesting alternative approaches decision analysts can offer workable solutions in domains such as the environment health and medicine engineering and operations research and public policy this book reviews and extends the material typically presented in introductory texts not a single book covers the broad scope of decision analysis at this advanced level it will be a valuable resource for academics and students in decision analysis as well as decision analysts and managers
