this article is a preliminary draft for initiating and commencing a new pioneer dimension of expression to deal with higher dimensional data or information flowing in this modern era of

information technology and artificial intelligence some innovative super algebraic structures are essential to be formulated in this paper we have introduced such matrices that have multiple layers and clusters of layers to portray multi dimensional data or massively dispersed information of the plithogenic universe made up of numerous subjects their attributes and sub attributes for grasping that field of parallel information events and realities flowing from the micro to the macro level of universes we have constructed hypersoft and hyper super soft matrices in a plithogenic fuzzy environment these matrices classify the non physical attributes by accumulating the physical subjects and further sort the physical subjects by accumulating their non physical attributes we presented the asplithogenicattributivesubjectivelywholehyper super soft matrix paswhss matrix andplithogenic subjective attributively whole hyper super soft matrix psawhss matrix several types of views and level layers of these matrices are described in addition some local aggregation operators for plithogenic fuzzy hypersoft set ppfhs set are developed finally few applications of these matrices and operators are used as numerical examples of covid 19 data structures
