it is commonplace that in our time science and technology cannot be mastered without the tools of mathematics but the same applies to an ever growing extent to many domains of everyday life not least owing to the spread of cybernetic methods and arguments as a consequence there is a wide demand for a survey of the results of mathematics for an unconventional approach that would also make it possible to fill gaps in one s knowledge we do not think that a mere juxtaposition of theorems or a collection of formulae would be suitable for this purpose because this would over emphasize the symbolic language of signs and letters rather than the mathematical idea the only thing that really matters our task was to describe mathematical interrelations as briefly and precisely as possible in view of the overwhelming amount of material it goes without saying that we did not just compile details from the numerous text books for individual branches what we were aiming at is to smooth out the access to the specialist literature for as many readers as possible since well over 700000 copies of the german edition of this book have been sold we hope to have achieved our difficult goal colours are used extensively to help the reader important definitions and groups of formulae are on a yellow background examples on blue and theorems on red

this publication in nea s curriculum series is written for middle school teachers without specialized backgrounds in geometry it is arranged in three parts and includes suggested

activities and exercises for students

an introduction to non euclidean geometry covers some introductory topics related to non euclidian geometry including hyperbolic and elliptic geometries this book is organized into three parts encompassing eight chapters the first part provides mathematical proofs of euclid's fifth postulate concerning the extent of a straight line and the theory of parallels the second part describes some problems in hyperbolic geometry such as cases of parallels with and without a common perpendicular this part also deals with horocycles and triangle relations the third part examines single and double elliptic geometries this book will be of great value to mathematics liberal arts and philosophy major students

the text allows for a variety of approaches to teaching encourages discussion and collaboration among students and with their instructors allows for the integration of projects into the curriculum and promotes discovery and active learning students using this text will receive solid preparation in mathematics develop confidence in their math skills and benefit from teaching and learning techniques that really work

exploring geometry second edition promotes student engagement with the beautiful ideas of geometry every major concept is introduced in its historical context and connects the idea with real life a system of experimentation followed by rigorous explanation and proof is central exploratory projects play an integral role in this text students develop a better sense of how to prove a result and visualize connections between statements making these connections real they develop the intuition needed to conjecture a theorem and devise a proof of what they have observed features second edition of a successful textbook for the first undergraduate course every major concept is introduced in its historical context and connects the idea with real life focuses on experimentation projects help enhance student learning all major software programs can be used free software from author
