this monograph provides detailed background on the image processing problems encountered in the food industry when automatic control and inspection systems are being designed and installed it starts with a careful study of image processing and machine vision methodology and then goes on to analyse how this can be applied in the main areas of food processing and production a case study approach is used to give relevance to the work making the book user friendly this book will help the food industry to observe due diligence and researchers to be more aware of the problems of analysing images of food products

data processing primarily concerned with studying experimentally the distribution and excretion of inhaled mixed fission products has been streamlined and

automated considerably an automatic read out counting system is in use which allows the radioactivity information from the scaling system to be transmitted directly to punch tape and or type writer additional sample information such as tissue identification and weight counting time experiment number etc is preset with thumb wheel switches into a data input box read out of the data input box just precedes scaler read out the signal for which is given by the end of preset counting time the punched tape is converted to cards which are stored until completion of an experiment at this time the information is used in a program to compute the necessary parameters for final distribution and excretion analysis when desired the computer plots the radioactivity data from any given series of tissue or whole body determinations and yields the constants of the least squares equations integration of the function may also be performed for dosage determination

this book introduces core natural language processing nlp technologies to non experts in an easily accessible way as a series of building blocks that lead the user to understand key technologies why they are required and how to integrate them into semantic applications natural language processing and semantic technologies have different but complementary roles in data management combining these two technologies enables structured and unstructured data to merge seamlessly semantic technologies aim to convert unstructured data to meaningful representations which benefit enormously from the use of nlp technologies thereby enabling applications such as connecting text to linked open data connecting texts to each other semantic searching information visualization and modeling of user behavior in online networks the first half of this book describes the basic nlp processing tools tokenization part of speech tagging and morphological analysis in addition to the main tools required for an information extraction system named entity recognition and relation extraction which build on these components the second half of the book explains how semantic and nlp technologies can enhance each other for example via semantic annotation ontology linking and population these chapters also discuss sentiment analysis a key component in making sense of textual data and the difficulties of performing nlp on social media as well as some proposed solutions the book finishes by investigating some applications of these tools focusing on semantic search and visualization modeling user behavior and an outlook on the future

the most complete current guide to the signal processing techniques essential to advanced radar systems fully updated and expanded fundamentals of radar signal processing second edition offers comprehensive coverage of the basic digital signal processing techniques and technologies on which virtually all modern radar systems rely including target and interference models matched filtering waveform design doppler processing threshold detection and measurement accuracy the methods and interpretations of linear systems filtering sampling and fourier analysis are used throughout to provide a unified tutorial approach end of chapter problems reinforce the material covered developed over many years of academic and professional education this authoritative resource is ideal for graduate students as well as practicing engineers fundamentals of radar signal processing second edition covers introduction to radar systems signal models pulsed radar data acquisition radar waveforms doppler processing detection fundamentals measurements and tracking introduction to synthetic aperture imaging introduction to beamforming and space time adaptive processing
