in many application areas it is necessary to make effective decisions under constraints several area specific techniques are known for such decision problems however because these techniques are area specific it is not easy to apply each technique to other applications areas cross fertilization between different application areas is one of the main objectives of the annual international workshops on constraint programming and decision making those workshops held in the us el paso texas in europe lyon france and in asia novosibirsk russia from 2008 to 2012 have attracted researchers and practitioners from all over the world this volume presents extended versions of selected papers from those workshops these papers deal with all stages of decision making under constraints 1 formulating the problem of multi criteria decision making in precise terms 2 determining when the corresponding decision problem is algorithmically solvable 3 finding the corresponding algorithms and making these algorithms as efficient as possible and 4 taking into account interval probabilistic and fuzzy uncertainty inherent in the corresponding decision making

problems the resulting application areas include environmental studies selecting the best location for a meteorological tower biology selecting the most probable evolution history of a species and engineering designing the best control for a magnetic levitation train
