engineers scientists and technologists will find here for the first time a clear and comprehensive account of applications of ultrasonics in the field of process control using numerous examples of high volume low cost applications the author illustrates how the use of new transducer materials and designs combined with microprocessor based electronics make technical and financial sense for concepts that only a few years ago might have been of interest only to academicians some of the important topics covered include coupling acoustic isolation transducer and sensor design and signal detection in the presence of noise

the objective of this research project is to identify develop and evaluate a simple economical and reliable calorimetry device and test method for monitoring heat evolution of pavement concrete the project contains three phases phase i identifying user needs for calorimeter tests phase ii identifying potential calorimeter devices and developing test procedures and phase iii verifying the test procedures and the potential applications of calorimetry in field in this report the work done in phases i and ii is briefly summarized and the study of phase iii is presented the phase iii study includes three parts 1 field calorimetry tests 2 lab tests for the field materials and 3 implementation of calorimetry into pavement performance prediction the field tests were conducted at three selected sites us 71 atlantic iowa highway 95 alma center wisconsin and us 63 bypass ottumwa iowa a simple isothermal calorimetry and two semi adiabatic calorimetry adiacal and iq drum tests were conducted at these sites the general concrete such as slump air content unit weight placement temperature astm c403 set time and pavement properties such as subbase temperature and sawing time were also measured in the lab tests of the field materials nine robust mixes for each field site with different variations in water reducer and or fly ash dosages were developed adiacal and isothermal calorimeter tests were performed for each of the robust mixes iq drum and astm c403 set time tests were conducted for selected mixes to implement the

calorimetry test results into concrete performance prediction the high performance paving hiperpav computer program was modified the calculated hydration curve parameters from selected calorimetry tests were used as inputs for the modified hiperpav program and the temperature developments of in situ pavements were then predicted the phase iii test results confirmed the major findings drawn in the phase ii study the results indicate that both the adiacal and semi adiabactic calorimetry tests can provide valuable information on concrete performance adiacal calorimetry is particularly good for field concrete set time prediction and it is sensitive to the sample temperature isothermal calorimetry can provide users more detailed information on cement hydration and provide more consistent test results the thermal set times obtained from both the adiacal and isothermal calorimetry tests are closely related to those measured from the astm c403 tests using the calorimetry test curve as inputs for the hiperpav computer program in situ concrete pavement temperatures can be predicted adequately
