heavenly intrigue is the fascinating true account of the seventeenth century collaboration between johannes kepler and tycho brahe that revolutionized our understanding of the universe and ended in murder one of history's greatest geniuses kepler laid the foundations of modern physics with his revolutionary laws of planetary motion but his beautiful mind was beset by demons born into poverty and abuse half blinded by smallpox he festered with rage resentment and a longing for

worldly fame brahe his mentor was a flamboyant aristocrat who had spent forty years mapping the heavens with unprecedented accuracy but he refused to share his data with kepler with brahe s untimely death in prague in 1601 rumors flew across europe that he had been murdered but it took twentieth century forensics to uncover the poison in his remains and the detective work of joshua and anne lee gilder to identify the prime suspect the ambitious envy ridden kepler himself a fast paced true life account that reads like a thriller heavenly intrigue is a remarkable feat of historical re creation

the danish aristocrat and astronomer tycho brahe personified the inventive vitality of renaissance life in the sixteenth century brahe lost his nose in a student duel wrote latin poetry and built one of the most astonishing villas of the late renaissance while virtually inventing team research and establishing the fundamental rules of empirical science his observatory at uraniborg functioned as a satellite to hamlet's castle of kronborg until tycho abandoned it to end his days at the court of the holy roman emperor rudolf ii in prague this illustrated biography presents a new and dynamic view of tycho's life reassessing his gradual separation of astrology from astronomy and his key relationships with johannes kepler his sister sophie and his kinsmen at the court of king frederick ii

nicholas jardine offers here an edition and the first translation into english of johannes kepler's a defence of tycho against ursus he accompanies this with essays on the provenance of the treatise the circumstances which provoked kepler to write it an analysis of its strategy style and historical sources and of the contents of ursus' treatise on astronomical hypotheses to which kepler was replying dr jardine also provides three extended interpretive essays on the intrinsic interest and historical significance of the work

german astronomer johannes kepler 1571 1630 derived his mathematical laws of planetary motion from astronomical data meticulously collected by tycho brahe who as he was dying beseeched young kepler to use the data to discover the laws of motion of the planets and for more please read the book thanks

on his deathbed in 1601 the danish nobleman and greatest naked eye astronomer tycho brahe begged his young colleague johannes kepler let me not seem to have lived in vain for more than thirty years mostly in his native denmark and then in prague under the patronage of the holy roman emperor rudolph ii tycho had meticulously observed the movements of the planets and the positions of the stars from these observations he developed his tychonic system of the universe a highly original if incorrect scheme that attempted to reconcile the ancient belief that the earth stood still with nicolaus copernicus's revolutionary rearrangement of the solar system some fifty years earlier tycho knew that kepler the brilliant young mathematician he had engaged to interpret his findings believed in copernicus's arrangement in which all the planets circled the sun and he was afraid his system the product of a lifetime of effort to explain how the universe worked would be abandoned in point of fact it was from his study of tycho's observations came kepler's stunning three laws of planetary motion ever since the cornerstone of cosmology and our understanding of the heavens yet as kitty ferguson reveals neither of these

giant figures would have his reputation today without the other the story of how their lives and talents were fatefully intertwined is one of the more memorable sagas in the long history of science set in a singularly turbulent and colorful era in european history at the turning point when medieval gave way to modern tycho kepler is both a highly original dual biography and a masterful recreation of how science advances from tycho s fabulous uraniborg observatory on an island off the danish coast to the court of the holy roman emperor rudolph ii from the religious conflict of the thirty years war that rocked all of europe to kepler s extraordinary leaps of understanding ferguson recounts a fascinating interplay of science and religion politics and personality her insights recolor the established characters of tycho and kepler and her book opens a rich window onto our place in the universe

johannes kepler life and letters was written as a biography of johannes kepler using his own letters the letters extend over a period of time from 1596 to 1631 bringing to the reader keplers personality rather than his scientific achievements the book represents his youth and years of apprenticeship marriage and first scholarly achievements the imperial mathematics at the court in prague the difficult years in linz and the oddessy of the last four years encompassing 1948 to 1951

german astronomer johannes kepler 1571 1630 derived his mathematical laws of planetary motion from astronomical data meticulously collected by tycho brahe who as he was dying beseeched young kepler to use the data to discover the laws of motion of the planets based upon kepler s laws sir isaac newton later developed his law of gravity this is a chapter from sir robert stawell ball s great astronomers 2nd ed 1907 ball traces kepler s life from birth in 1571 to death at age 59 in 1630 though kepler had not those personal characteristics which have made his great predecessor tycho brahe such a romantic figure yet a picturesque element in kepler s character is not wanting it was however of an intellectual kind his imagination as well as his reasoning faculties always worked together he was incessantly prompted by the most extraordinary speculations the great majority of them were in a high degree wild and chimerical but every now and then one of his fancies struck right to the heart of nature and an immortal truth was brought to light

a mere inference or theory must give way to a truth revealed but a scientific truth must be maintained however contradictory it may appear to the most cherished doctrines of religion sir david brewster if the distinguished author of this unpretending little volume had undertaken to write the history of the origin of physical astronomy he could not have thrown his narrative into a more convenient or interesting form than by writing the lives of galileo tycho brahe and kepler these three names occupy by far the most conspicuous place in the annals of astronomy between those of copernicus and newton by explaining the phenomena of the celestial motions on the hypothesis of the immobility of the sun and the twofold motion of the earth copernicus made the first step towards the true theory of the universe but he did not discard the eccentrics and epicycles of the ancient faith and the universally received dogma of antiquity uniform motion in circular orbits remained undisturbed in order to proceed a step beyond the point at which copernicus had arrived observations of greater precision and more distinct ideas

respecting the laws of motion were necessary tycho brahe furnished the observations kepler with infinite labour and sagacity traced out their consequences and proved from them that the planetary orbits are not circles but ellipses and that the motions are not uniform though regulated by a law remarkable for its simplicity and beauty galileo directed the telescope to the heavens fortified the copernican doctrine with new proofs and by the discovery of the laws of motion prepared the way for the dynamical theories of newton in effecting this advance from formal to physical astronomy no other individual contributed in any remarkable degree hence the history of their labours includes that of the science itself during one of the most interesting periods of its progress the work derives its interest from the vivid portraiture it places before us of the characters of men whose labours occupy a large space in the history of science and whose endeavors to enlighten the world were attended with so many personal sacrifices it is written in an agreeable style it abounds with traits of good feeling and generous sympathy and what may be regarded as of importance in a popular work it represents science and its pursuits under an attractive and dignified aspect the edinburgh review or critical journal july 1844

tycho brahe december 14 1546 october 24 1601 was a danish nobleman known for his accurate and comprehensive astronomical and planetary observations he was born in the then danish peninsula of scania well known in his lifetime as an astronomer astrologer and alchemist he has been described as the first competent mind in modern astronomy to feel ardently the passion for exact empirical facts his observations were some five times more accurate than the best available observations at the time an heir to several of denmark s principal noble families he received a comprehensive education he took an interest in astronomy and in the creation of more accurate instruments of measurement as an astronomer tycho worked to combine what he saw as the geometrical benefits of the copernican system with the philosophical benefits of the ptolemaic system into his own model of the universe the tychonic system his system correctly saw the moon as orbiting earth and the planets as orbiting the sun but erroneously considered the sun to be orbiting the earth furthermore he was the last of the major naked eye astronomers working without telescopes for his observations there from 1600 until his death in 1601 he was assisted by johannes kepler who later used tycho s astronomical data to develop his three laws of planetary motion
