debilitating food shortages and tragic famines have been among the major problems facing many sub saharan countries in africa since the early 1970s ethiopia is one of the most severely affected countries in the region the country s drought prone areas on which this study focuses are suffering from severe ecological degradation and food insecurity the general trend in these areas represents the prevalence of disharmony between the natural resource base and the population to be sustained this research explores the relationship between growing ecological degradation and declining agricultural productivity on the one hand and increasing population density on the other it presents profound discussion on public awareness and perception

about rural resources degradation and uncovers the social and demographic consequences of ecological degradation and food insecurity based on primary micro level data collected from selected drought prone communities in northern ethiopia specifically it attempts to measure the demographic changes that have taken place in the period 1984 1994 and interpret them in the context of demographic transition theory it is argued that stress due to degradation of resources has compelled local people to realize the disadvantage of having a large number of children and apparently has led to fertility decline

this volume examines the interrelationship of ecology subsistence patterns and the observed genetic variation in human populations hence the book is divided conceptually into the following categories nonhuman primates hunters and gatherers nomads swidden agriculturalists peasant farmers religious isolates and modern and urban aggregates while many of these populations have experienced and are experiencing acculturation as a result of contact with technologically more advanced groups the genetic structures described in this volume attempt to reconstruct the traditional patterns as well as genetic changes because of contact most chapters also integrate biological genetic social and demographic data within an ecological frame thus presenting a holistic view of the population structures of ecologically distinct groups the first chapter examines the body of early nonhuman primate literature that emphasized ecological determinism in effecting the population structure of our primate ancestors relatives it also examines more recent literature since 1970 in which it became apparent that greater flexibility exists in primate social structure within specific environmental frameworks thus it appears that our nonhuman primate evolutionary heritage is not one of ecological determinism in social organization but one of flexibility and rapid change suggesting the evolutionary success of our species is based upon a system of flexibility and that social adaptations can be accomplished in a number of diverse ways
