the motivations goals and general culture of theoretical physics and mathematics are  
different most practitioners of either discipline have no necessity for most of the time to  
keep abreast of the latest developments in the other however on occasion newly  
developed mathematical concepts become relevant in theoretical physics and the less  
rigorous theoretical physics framework may prove valuable in understanding and  
suggesting new theorems and approaches in pure mathematics such interdisciplinary  
successes invariably cause much rejoicing as over a prodigal son returned in recent  
years the framework provided by quantum field theory and functional integrals  
developed over half a century in theoretical physics have proved a fertile soil for  
developments in low dimensional topology and especially knot theory given this  
background it was particularly pleasing that nato was able to generously support an  
advanced research workshop to be held in cambridge england from 6th to 12th  
september 1992 with the title low dimensional topology and quantum field theory  
although independently organised this overlapped as far as some speakers were  
concerned with a longer term programme with the same title organised by professor m

green professor e corrigan and dr r lickorish the contents of this proceedings of the workshop demonstrate the breadth of topics now of interest on the interface between theoretical physics and mathematics as well as the sophistication of the mathematical tools required in current theoretical physics

nutrition and drug interrelations examines and presents the different relations of nutrition metabolism and effects of drugs including drugs positive effects in the field of animal husbandry and human and veterinary medicine this book also highlights the importance of the interrelations between nutrition and drugs the introductory chapter gives an overview of the variable role of food in humans on a historical and sociological context and perspective the first section of this book deals with the impacts of drugs on the nutrition process these impacts can either be harmless or harmful depending on the adequacy of nutrition the second section of this book describes some of the many influences of nutritional condition on biochemical competence to cope with xenobiotics including drugs the third section highlights the various uses of pharmacological agents in food production this section also discusses some concerns about the effect in the food chain of pharmacological agents the last section in this book demonstrates the overlap in boundary between dietetic and pharmacological treatments given focus is the use of vitamin d derivatives and megavitamin treatments with doubtful benefits this book will benefit most students and professionals in the field of food and nutrition human and veterinary medicine and animal husbandry the subject area in this book will also yield interest from people involved in metabolism nutrition and pharmacology

structures placed on hillsides often present a number of challenges and a limited number of economical choices for site design an option sometimes employed is to use the building frame as a retaining element comprising a rigidly framed earth retaining structure rfers the relationship between temperature and earth pressure acting on rfers is explored in this monograph through a 4 5 year monitoring program of a heavily instrumented in service structure the data indicated that the coefficient of earth pressure behind the monitored rfers had a strong linear correlation with temperature the study also revealed that thermal cycles rather than lateral earth pressure were the cause of failure in many structural elements the book demonstrates that depending on the relative stiffness of the retained soil mass and that of the structural frame the developed lateral earth pressure during thermal expansion can reach magnitudes several times larger than those determined using classical earth pressure theories additionally a nearly perpetual lateral displacement away from the retained soil mass may occur at the free end of the rfers leading to unacceptable serviceability problems these results suggest that reinforced concrete structures designed for the flexural stresses imposed by the backfill soil will be inadequately reinforced to resist stresses produced during the expansion cycles parametric studies of single and multi story rfers with varying geometries and properties are also presented to investigate the effects of structural stiffness on the displacement of rfers and the lateral earth pressure developed in the soil mass these studies can aid the reader in selecting appropriate values of lateral earth pressure for the design of rfers finally simplified closed form equations that can be used to predict the lateral drift of rfers are presented key words earth pressure soil structure interaction mechanics failure distress temperature thermal effects concrete coefficient of thermal expansion segmental bridges jointless bridges integral bridges geotechnical instrumentation finite element modeling fem numerical modeling
