this book deals with a spectrum of problems related to the mathematical modeling of multiphase filtration emphasis is placed on an inseparable triad model algorithm computer code an analysis of new and traditional filtration problems from the point of view of both their numerical implementation and the reproduction of one or another technological characteristics of the processes under consideration is given the basic principles which underlie the construction of efficient numerical methods taking into account the filtration problems are discussed non evolutionary nature degeneration strongly varying coefficients the temporal duration of the processes involved etc also attention is paid to the splitting method in terms of the physical processes involved the method of fictitious domains and the method of front separation in grid solution a modular analysis is performed with computational algorithms making it possible to set up simultaneously the structure of the algorithms themselves and the structure of programs to implement these algorithms on a computer in conclusion the author discusses issues concerning the possibility of constructing a model of an oil deposit on a computer

this volume in the inverse and ill posed problems series studies dynamical inverse problems i e such problems whose data are the values of wave fields the monograph deals with the problem of determination of one or more coefficients of a hyperbolic equation or a system of hyperbolic equations the desired coefficients are functions of point most attention is given to the case where the required functions depend only on one coordinate the first chapter of the book deals mainly with methods of solution of one dimensional inverse problems the second chapter focuses on scalar inverse problems of wave propagation in a layered medium in the final chapter inverse problems for elasticity equations in stratified media and acoustic equations for moving media are given this monograph will be of value and interest to researchers in the fields of mathematical physics geophysics acoustics elasticity theory and electrodynamics

in the problem of the idea of culture in john paul ii exposing the disruptive agency of the philosophy of karol wojtyla john corrigan provides a new lens with which to view and

understand the philosophy of karol wojtyla john paul ii he exposes wojtyla as a major player in contemporary philosophical debates the work reformulates the problem of experience in light of the questions surrounding our idea of culture corrigan argues that for wojtyla the drama of the problem of experience manifests in the apparently divergent accounts of the meaning of human experience as presented by the philosophies of being and of consciousness solving this conundrum results in an idea of the person capable of explaining human experience in relation to human culture unfolding the experiences of self knowledge conscience and the ontic causal relationship of the person to human culture the first part of the book concerns formal considerations regarding the constitutive aspects of wojtyla s approach while the second part deals with pragmatic considerations drawn from his comments on culture
