departing from the simple question why do we heat and cool buildings with air this book focuses on the technique of thermally active surfaces the book contrasts the parallel histories of thermally active
surfaces and air conditioning

much of modern architecture has been conceived using glass to create minimal structures this book begins with an introduction that traces the history of glass in architecture and also describes the
developments in glass technology it also features specially commissioned photographs by the renowned architectural photographer dennis gilbert

transparency and luminescence have reemerged in the vocabulary of architecture and light and lightness have become key concepts for a significant number of contemporary architects as well as artists
who create installations recent work by these designers recalls the use of transparent materials in early modern structures but they have introduced new ideas and technical solutions in doing so they have
redefined the relationship between the observer and the structure by interposing elements that both veil and illuminate in this architecture of lightness buildings become intangible structures shed their
weight and facades become unstable dissolving into an often luminous evanescence the 33 projects illustrated in this book exemplify this emerging sensibility which is examined in a penetrating essay by
terence riley chief curator of the department of architecture and design at the museum of modern art that places the new work in a broad historic and cultural perspective more than 30 architects are
represented in this international selection and it includes a broad range of building types scales and technologies from the small leisure studio created by a group of young finnish architects to renzo piano
s enormous kansai international airport in japan also shown are the goetz collection in munich by herzog de meuron the fondation cartier in paris by jean nouvel the itm building in matsuyama japan
by toyo ito and a set design by tod williams and billie tsien each project includes a description by terence riley or anne dixon

contributions by peter zumthor

exploring the design of innovative building enclosure systems or skins in contemporary architecture and their precedents in earlier twentieth century modern architecture this book examines the tectonics the history and the influence of translucency as a defining characteristic in architecture highly illustrated throughout with drawings and full colour photographs the book shows that translucency has been and continues to be a fertile ground for architectural experimentation each chapter presents a comparative analysis of two primary buildings a recent project paired with a historical precedent highlighting how architects in different eras have realized the distinctive effects of translucency the included buildings span a variety of program types ranging from a single family residence to a factory to a synagogue whether it is pierre chareau's glass lens curtain wall at the maison de verre frank lloyd wright's wall of stacked glass tubes at the johnson wax research tower or peter zumthor's use of acid etched glass in a double skin envelope at the kunsthaus bregenz the included projects each offer an exemplary case study of innovations in materiality and fabrication techniques today among many contemporary architects there is an engagement with new technologies new material assemblies and new priorities such as sustainability and energy efficiency a resurgent interest in translucency as a defining quality in buildings has been an important part of this recent dialogue and this book makes essential reading for any architect looking to incorporate aspects of translucency into their buildings

peter sloterdijk sees our digitalized world in a growing spatial crisis accompanied by the danger of a general virtuality of all relationships others view the digitalization of the world as opening up a grassroots democratic space that allows everyone access to culture against this backdrop this anthology examines the spatial characteristics of the museum between physical place and virtual space the chapters collected here approach the museum space from various disciplinary perspectives such as philosophy history art history architecture scenography museum education and curatorial studies at the same time the contributions by international museum experts are assigned to different literary genres fundamental considerations alternate with think pieces case studies and interviews
